Comprehending Multipliers, Win Probabilities, and House Edge

In Limbo, gamers have overall control over their risk and reward ratio. Choosing a lower multiplier increases the likelihood of winning, while choosing a greater multiplier reduces it.

To comprehend the mathematical relationship, think about the basic formula for win likelihood in a basic Limbo game (assuming a 1% home edge):

£ £ \ text Win Probability (%) = \ frac 100 - \ text House Edge (%) \ text Target Multiplier £ £

Example Multiplier vs. Probability Breakdown

Target Multiplier Theoretical Win Probability (1% House Edge) Payout on a £ 10 Bet **1.01 x** 99.00% £ 10.10 **1.50 x** 66.00% £ 15.00 **2.00 x** 50.00% £ 20.00 **5.00 x** 20.00% £ 50.00 **10.00 x** 10.00% £ 100.00 **50.00 x** 2.00% £ 500.00 **100.00 x** 1.00% £ 1,000.00 **1,000.00 x** 0.10% £ 10,000.00

As displayed in the table, setting the target to 2.00 x offers the player a 50% opportunity of winning (minus the house edge), doubling the stake upon success. On the other hand, aiming for 1,000 x decreases the success rate to just 0.1%.
