- **Rock** crushes Scissors.
- **Scissors** cuts Paper.
- **Paper** covers Rock.

Techniques for Winning at RPS Gambling

Lots of casual observers presume RPS is 100% luck. Nevertheless, game theorists, computer researchers, and professional tournament players know in a different way. People are infamously bad at generating truly random sequences. By understanding human habits, gamblers can significantly increase their win rate.

1. Exploit the "Win-Stay, Lose-Shift" Tendency

Mental studies on RPS reveal an extremely clear human bias called the "win-stay, lose-shift" pattern:

- If a player **wins** a round, they tend to toss the **exact same** option in the next round.
- If a gamer **loses** a round, they tend to shift to the option that *would have beaten* their opponent's last winning move.

How to use this in gambling: If an opponent tosses Rock and beats your Scissors, expect that they will likely toss Rock again in the next round. For that reason, you should counter with Paper.

2. The Power of "Rock"

Statistically, casual and unskilled gamers throw **Rock** initially regularly than Paper or Scissors. Why? Since Rock feels effective, aggressive, and acts as a default beginning option for many. When beginning a session against a new human opponent, opening with Paper is often a statistically sound protective play.

3. Avoid Predictable Sequences

When playing against a computer RNG, human psychology does not matter-- math does. To prevent falling under patterns that an algorithm can exploit, players must randomize *rps gambling* their options similarly over time.
