Unlike conventional slots with complex paylines or blackjack with deep strategic charts, Limbo strips gambling down to pure numbers. There are no flashing lights, themed symbols, or narrative arcs. Instead, gamers are welcomed by a clean user interface including a target multiplier input box, a bet quantity selector, and a popular "Bet" button.

How a Standard Round Works:

1. **Set the Bet:** The player chooses how much currency to wager on the round.
2. **Select a Target Multiplier:** The gamer chooses their preferred payment multiplier (e.g., 2.00 x, 10.00 x, and even 1,000,000 x).
3. **Chance:** The player initiates the round.
4. **The Outcome:** The game's random number generator (RNG) produces an outcome. If the produced multiplier is *equal to or greater* than the target, the player wins their bet multiplied by the target. If it falls short, the stake is lost.

Comprehending the Mechanics and House Edge

To the unaware, the massive potential payouts in Limbo can appear too great to be true. However, the game runs on strict mathematical possibilities. Every target multiplier has a matching win probability.

|Target Multiplier|Win Probability (Approx. with 1% House Edge) ||:-- |:--|| **1.01 x**|98.02% | **2.00 x**|49.50% | **5.00 x**|19.80% | **10.00 x**|9.90% | **50.00 x**|1.98% | **100.00 x**|0.99% | **1,000.00 x**|0.099%|

As highlighted in the table above, the greater the multiplier a player chases after, the lower their analytical opportunity of winning.
