- **Tough/ Expert Mode:** Narrow towers or grids loaded with several traps. The multipliers increase from the really first action, but the chances of failure are remarkably high.

2. The Multiplier Effect

As players rise, their payment is increased by the coefficient of each level effectively cleared. Because multipliers compound, the dive from level to level can turn a modest wager into an enormous payment within just a couple of clicks.

Example of a Tower Game Paytable (Medium Difficulty)

To imagine how the mathematics work, consider a basic medium-difficulty tower where a gamer should pick 1 safe tile out of 3 options per row:

Level	Multiplier	Possibility of Success (Per Row)	Cumulative Probability from Start
Level 1	1.45 x	66.6%	66.6%
Level 2	2.10 x	66.6%	44.4%
Level 3	3.05 x	66.6%	29.6%
Level 4	4.42 x	66.6%	19.7%
Level 5	6.41 x	66.6%	13.1%
Level 10	40.00 x	66.6%	1.7%

Note: Exact multipliers differ depending upon the specific software application provider and your house edge.
