What is the Limbo Casino Game?

Limbo is an instant-win gambling establishment game promoted mostly by crypto-focused online casinos. Influenced by the "Crash" mechanic, Limbo eliminates the rising rocket or line chart, replacing it with a single, instantaneous result.

When a player opens a Limbo game, they exist with two primary inputs:

1. **The Bet Amount:** How much money they desire to bet on the round.
2. **The Target Multiplier:** The specific multiplier they hope the game will hit or surpass (e.g., 2x, 10x, 100x, or even 1,000,000 x).

When the player clicks the "Bet" or "Roll" button, the game quickly produces a random number. If the produced number is **higher than or equal to** the target multiplier, the player wins. If it falls below, the bet is lost.

How the Game Mechanics Work

At its core, Limbo is a game of possibility. Unlike slots, where signs dictate wins, Limbo relies completely on math and possibility percentages.

When a gamer sets a target multiplier, the game instantly computes 2 important metrics:

- **Win Chance:** The mathematical probability of hitting that specific multiplier.
- **Payout:** The overall return if the target is reached (Bet £ \ times £ Target Multiplier).

Example of Limbo Mechanics

To understand how target multipliers affect gameplay, think about the list below standard setup (which normally includes a 1% home edge):

Target Multiplier Win Chance (%) Potential Payout on £ 10 Bet **1.10 x** 90.90% £ 11.00 **2.00 x** 50.00% £ 20.00 **5.00 x** 20.00% £ 50.00 **10.00 x** 10.00% £ 100.00 **50.00 x** 2.00% £ 500.00 **100.00 x** 1.00% £ 1,000.00 **1,000.00 x** 0.10% £ 10,000.00

As revealed in the table, as the potential payout increases, the win possibility decreases proportionally.
