Cases, on the other hand, are random drops earned by playing on official or community servers, or they can be purchased directly from the Steam Community Market and third-party trading websites.

When a case is opened, a roulette-style animation plays, biking through numerous weapon surfaces before stopping on a single item. The item gotten is determined totally by server-side RNG (Random Number Generation) the precise moment the animation starts.

Every item inside a case falls into a particular rarity tier, which determines its drop rate and general worth. Additionally, products can drop in among 5 outside conditions, ranging from Factory New to Battle-Scarred, and may occasionally feature a rare "StatTrak" module that tracks eliminates.
