2. **Deposit:** The player selects products from their Steam inventory to deposit. The site's bot sends a trade deal to the user.
3. **Balance Conversion:** Once the trade is accepted, the skins are transferred to the site's bot stock, and the gamer's on-site wallet is credited with virtual coins or credits.
4. **Playing and Withdrawing:** After gambling, users can check out the site's "store" to withdraw new skins of equivalent worth by means of another automated trade offer.

- **Trade Hold Updates:** To curb immediate trading and gambling flow, Valve presented a 7-day trade hold on any item traded in between users. While this decreased instantaneous skin-betting ecosystems, the
