

RV Engine Diagnostic Repair Valdosta GA Bennett Mobile Truck Repair Engine problems are the most common reason RV travelers call for roadside assistance, and they are also the most varied. A Class A motorhome sitting on the shoulder of I-75 near Valdosta might be dealing with a Cummins ISL that has gone into derate mode due to an aftertreatment fault, a Freightliner chassis with a cooling system issue triggered by a stuck thermostat, or a gas-powered Class C with a fuel delivery problem causing hard starts. Bennett Mobile Truck Repair handles all of these scenarios with direct laptop diagnostic connections to the RV's engine management systems, giving technicians the real-time fault codes and live data needed to identify the actual cause rather than making educated guesses. The diagnostic approach at Bennett Mobile Truck Repair reflects Adam Bennett's background in commercial diesel repair, where inaccurate diagnosis is an expensive mistake that fleet managers and owner-operators will not tolerate twice. That same precision carries over to RV engine work. The team reads active fault codes, analyzes sensor data, checks wiring for faults, and confirms the repair has actually resolved the issue before the traveler gets back on the road. This [Motorhome roadside repair](#) is the standard that earned the company its reputation along the I-75 corridor in South Georgia. For RVs with Cummins, Detroit Diesel, CAT, Duramax, Powerstroke, or other major diesel platforms, the team has specific experience with the failure modes most common in each. DPF and SCR system faults that cause derates, EGR valve issues, fuel injector problems, turbocharger failures, and coolant system breakdowns are all within the team's regular diagnostic and repair experience. Chassis platforms including Freightliner Custom Chassis and Spartan are also within scope.

Bennett Mobile Truck Repair | 100 N Patterson St Ste 98, Valdosta, GA 31601 | 229-740-9286

Bennett Mobile Truck Repair

**100 N Patterson St, Ste 98
