1. The Low-Multiplier Auto-Cashout Strategy

- **How it works:** Players set an automatic cash-out point at a very low multiplier, such as **1.20 x to 1.35 x**.
- **The Pros:** Statistically, a crash game survives previous 1.20 x the majority of the time. This yields frequent, consistent wins.
- **The Cons:** When a 1.00 x crash (immediate bust) takes place, it erases numerous previous small wins.

2. The Martingale System

- **How it works:** A traditional betting technique where a player doubles their bet after every loss. When they ultimately win, they recover all previous losses plus a profit equal to the original base bet.
- **The Pros:** Can be reliable over brief sessions with a repaired target multiplier (e.g., 2.00 x).
- **The Cons:** Requires an enormous bankroll. A string of 6 or 7 consecutive 1.00 x crashes can entirely deplete a player's funds due to exponential development.

3. The Reverse Martingale (Paroli System)

- **How it works:** Doubling the bet after every *win* and resetting to the base bet after a loss.
- **The Pros:** Capitalizes on winning streaks without running the risk of big amounts of individual capital throughout losing streaks.
- **The Cons:** Relies completely on striking consecutive winning rounds.
