The Ultimate Guide to CS: GO Weapon Cases: History, Mechanics, and Value

Counter-Strike: Global Offensive (CS: GO) has developed an enormous economy around its virtual weapon skins. Central to this environment are Weapon Cases-- locked containers that gamers can open utilizing a particular secret to expose a random skin. For both new players and experienced veterans, understanding these cases is crucial to navigating the market and the gameplay loop.

This guide supplies a detailed overview of CS: GO weapon cases, exploring how they work, the most valuable ones, and the mathematics behind the opening mechanics.

What Are CS: GO Weapon Cases?

Weapon Cases are digital boxes that appear in CS: GO gameplay. They are not found by playing the video game straight anymore (as they remained in earlier "Operations"); instead, they are normally acquired as random drops after finishing a match or are acquired from the Steam Community Market.

To open a case, players need to purchase a **Case Key** from the in-game shop or the Steam market. The key is consumed upon use, and the result is a random skin figured out by a complicated **click here** probability algorithm.

The Rarity System

Every skin inside a case comes from a specific rarity tier. These tiers identify the probability of obtaining the product and its possible value.

CS: GO Rarity & Probability Table

Rarity Tier (Color)	Example Skin	Approximate Drop Chance (%)	Consumer Grade
Consumer Grade (White)	Well Worn P250	79.92%	
Mil-Spec (Blue)	Field-Tested AK-47	15.98%	
Restricted (Purple)	Factory New M4A4	3.20%	
Classified (Pink)	Minimal Wear Five-SeveN	0.64%	
Covert (Red)	Factory New AWP	0.26%	
Rare Special Item (Gold)	Karambit Knife, Sport Gloves	<0.01%	

portions above represent the "base" opportunity per opening. The actual "Blue Gems" (Gold tier) are extremely unusual, frequently approximated at less than 0.0001% for particular high-tier knives.

How the Opening Mechanic Works

When a gamer clicks "Unlock," the video game generates a random number. This number associates to a specific product within the case's pool.

Drift Value & StatTrak

An important element in determining a skin's value is its **Float Value**. This is a number in between 0 and 1 that represents the wear and tear of the weapon:

- **Factory New (FN):** 0.00 - 0.07
- **Very Little Wear (MW):** 0.07 - 0.15
- **Field-Tested (FEET):** 0.15 - 0.38

- **Well-Worn (WW):** 0.38 - 0.45
- **Battle-Scarred (BS):** 0.45 - 1.00

Furthermore, some skins feature a **StatTrak™** counter, tracking the variety of eliminates made with that weapon. StatTrak versions are usually more pricey than their basic counterparts.

Not all cases are created equivalent. Older cases, or those including famous skins like the "Fade" or "Case Hardened" Blue Gems, command astronomical rates on the Steam Community Market.
