Gamers get skins mostly by opening randomized loot boxes called "cases" using paid secrets, or by receiving random drops after matches. Due to the fact that some skins are exceptionally unusual, a supply-and-demand market quickly formed on the Steam Community Market.

Soon, third-party websites understood that these digital items held real-world financial value. Even with the shift from CSGO to CS2, this economy has actually remained largely undamaged and fiercely active.

| <b>Roulette</b>     | Similar to conventional roulette, but normally including three colors (e.g., Red, Black, and Green/Zero) representing various payout multipliers (2x, 2x, and 14x). Repaired home edge based upon the green/zero sectors.                      |                      |
| <b>Case Opening</b> | Imitates the in-game case opening experience, but often on third-party websites with custom-curated odds and higher-tier reward swimming pools. Very variable; normally prefers the house heavily.                                             |                      |

| <b>Jackpot</b>      | Numerous players contribute skins to a main pot. Each skin's value determines the player's "ticket" share. A spinner chooses one winner who takes everything. Based on the overall value contributed; platform takes a percentage charge.      |                      |
