What is the Mines Casino Game?

At its core, the Mines casino game is a provably fair arcade-style game inspired by the famous PC puzzle game *Minesweeper*. However, instead of clearing a huge grid to achieve a time trial, gamers in an online casino are charged with uncovering safe tiles on a smaller grid while preventing surprise landmines.

Every time a player discovers a safe tile (frequently represented as a gem, coin, or star), their multiplier boosts. They can pick to squander their jackpots at any time. Nevertheless, hitting a single mine quickly wipes out the current round's wager.

Secret Characteristics of Mines:

3. **Start the Round:** The player clicks "Bet" or "Play" to initialize the empty grid.
4. **Uncover Tiles:** The player clicks on private tiles. Each safe tile increases the payout multiplier.
5. **Money Out or Continue:** After every effective choice, the gamer can click the "Cash Out" button to secure their earnings, or continue clicking tiles to chase a higher multiplier.

- **Pros:** High win frequency; minimizes rapid bankroll deficiency.
- **Cons:** Individual payments are reasonably small, requiring patience to build up significant earnings.

- **Application in Mines:** Best used with a constant predetermined variety of tiles and cash-out points.
- **Warning:** Requires a significant bankroll and carries high danger due to table limitations or rapid capital exhaustion throughout a losing streak.

3. The Reverse Martingale (Paroli System)

- **How it works:** Instead of increasing bets after a loss, the player doubles their bet after a *win*.
- **Application in Mines:** Capitalizes on winning streaks. If a player effectively browses a high-multiplier round, they ride the momentum with a greater wager on the next round.
