Rather of transferring cash, gamers deposit **CS2 skins** that have a market worth determined by the Steam Community Marketplace. The worth of the transferred products is transformed into "chips" or a virtual balance, which can then be bet.

3. The Economics of CS2 Skins

- **Third-Party Market Adjustments**-- Most CS2 gambling establishment websites use their own price feeds, usually 5%-- 10% lower than Steam prices to secure versus rapid cost swings.

3.2. Conversion to Play Money

When a **CSGO Gambling Site** gamer trades a skin to the casino, the platform designates a **chip worth** based upon the site's conversion rate. For example:

Skin (Example)	Steam Market Price	Site Conversion Rate (-- 7%)	Chip Value
AK-47Redline (Classified)	£ 13.00	£	12.09
M4A4Howl (Contraband)	£ 320.00	£	297.60

The chip worth is then utilized to put bets. If the player wins, the payout is calculated in chips and later converted back into skins at the exact same rate.
