In easy terms, an iGaming aggregator is an innovation platform that links online gambling establishment operators with numerous video game material providers through a single combination.

Historically, if an online casino wanted to include games from ten different studios (such as NetEnt, Microgaming, Evolution, and Pragmatic Play), the operator's technical team needed to develop 10 separate API (Application Programming Interface) combinations. Each integration came with its own set of contracts, technical documentation, compliance obstacles, billing procedures, and maintenance schedules.

An iGaming aggregator fixes this bottleneck. By integrating with the aggregator's merged API, an operator gains instantaneous access to numerous material suppliers and countless games simultaneously.

| <b>Contract Management</b>    | Lots of specific agreements              | Single master contract (usually)       |
| <b>Financial Settlement</b>   | Several invoices and currencies          | Centralized billing and payments       |
| <b>Technical Maintenance</b>  | High overhead; vulnerable to broken APIs | Managed by the aggregator              |
| <b>Game Portfolio</b>         | Restricted to one studio's catalog       | Countless titles across several genres |
