In a theoretical, reasonable coin toss in the physical world, the likelihood of landing on heads or tails is exactly 50% (1 in 2, or £ 1/2 £). If gambling establishments provided a true 1:1 payout on a 50/50 game with no home edge, it would be a break-even game for the home, which breaks the basic service design of gambling.

To maintain an earnings, casinos adjust the payment chances or present a small charge.

Function Fair Coin Toss (Real World) Standard Casino Coin Flip **Probability of Heads** 50.00% ~ 49.5% to 50.00% (depending upon RNG) **Probability of Tails** 50.00% ~ 49.5% to 50.00% (depending on RNG) **Standard Payout** 2.00 x (Even Money) 1.96 x to 1.98 x (or 2.00 x with a 1-2% house fee) **House Edge** 0.00% Typically 1% to 3%

As revealed in the table above, your house edge is normally baked into the payment structure or taken as a tiny commission on winning bets.
