The Mathematics of Wagering: Payouts and House Edge

When played peer-to-peer, Rock Paper Scissors is a zero-sum game with reasonable odds. Nevertheless, when played in a casino setting or on specialized crypto-gambling platforms, your home must preserve an edge.

Typically, online Rock Paper Scissors games feature a best-of-one format or a best-of-three series. Since ties happen often (roughly 33% of the time), platforms manage draws in different ways.

Game Format	How Ties Are Handled	Approximate House Edge
Best of One	Money refunded on a tie; re-throw	1%-- 3% (by means of platform rake)
Best of Three	Re-throw only the connected round	2%-- 4%
Fixed Odds (vs. House)	House wins all ties	As much as 15% (Unfavorable)

2. Exploiting the Loser's Shift

When humans lose a round, they rarely throw the exact same sign again. Instead, they normally move to what *would* have beaten the sign that just beat them.

- *Example:* If Player A used **Rock** to beat Player B's **Scissors**, Player B lost with Scissors. In the next round, Player B will likely change to **Rock** (believing it beats the previous winning move) or **Paper**.
- **The Counter:** Anticipate this shift and pick the indication that beats their most likely next move.

3. Exploiting the Winner's Stays

On the other hand, when gamers win a round, they tend to stick with the winning sign for the next throw.

- **The Counter:** If your challenger simply won with **Paper**, anticipate them to toss **Paper** once again. Counter it with **Scissors**.
